

**OUR ENERGY TURNS
THE WORLD**

TEMSA TECH

NEVER SETTLE FOR THE STATUS QUO ALWAYS SEEK MORE

Our bold vision never let us settle for the status quo, but always empower us to seek more. Trailblazers as we are, always looking to the horizon and the future, continuously developing mobility solutions for the next generation. Experimentation and innovation are at the heart of every TEMSA product. The importance we place on R&D allows us to offer a wide variety of high-tech products to our customers.

With the rise of electric vehicles, our sector is experiencing serious challenges. Every automotive manufacturer is trying to change their product portfolios to electric vehicles, only to come across the multiple problems. Designing new vehicles under changed circumstances, acquiring cells or batteries, and extra hardware and software to ensure that the new system will run smoothly. All in all, everything is also constrained to the needs of projects. This will take us to the solution, which we named TEMSA Tech. TEMSA Tech is a way of doing business, creating smart, sustainable, and high-tech outcomes.

ONE STEP AHEAD WITH TEMSA TECH

Battery Pack, the crown jewel of the TEMSA Tech. It can reach high levels of volumetric and gravimetric energy densities. That means less space and volume required to produce more power. A single battery pack, with one charge, can power up the International Space Station for one day long. This beautiful energy comes packed with a smooth 2mm-8mm aluminum case which is also fundamentally light, just 50-62 kilograms. The degree of sophistication made not only one of the lightest batteries there is but also the most robust and durable one. The case is enduring enough to handle impacts and protect the batteries from environmental magnetic effects. Light on weight but high on impact, our certificated battery packs are available to order now.

However, providing massive amounts of energy is useless unless you are able to control it. The tailor-made battery will need a unique BMS. The Battery Management System is another pioneering achievement of TEMSA engineering. The revolutionary design of this system takes up a little space and also helps to bring down the maintenance costs. In charge of orchestration of batteries, the BMS always ensures the maximum level of efficiency and acts as an anti-aging agent. We are genuinely proud of its skills thanks to the in-house software that we built. Combine your batteries with this smart card, and be one of the future-seekers.

	TEMSA TRESS 35S	TEMSA TRESS 70A
Type	Lithium Ion NMC	Lithium Ion NMC
Case Type	Carbon Steel with Cataphoresis Coating	7mm Aluminium Cast Box
Full Capacity	35 kWh	70 kWh
Usable Capacity	31 kWh / 93Ah	60 kWh / 93Ah
Voltage Nominal	325	651
Voltage Max	370	742
Voltage Min	264	528
Continuous Discharge Current	1.5C / 150A	1.5C / 135A
Charge Current	1C / 90A	1C / 90A
Peak Discharge Current 60 sec	2.5C / 230A	2.5C / 230A
Weight (kg)	255	504
Volume (L)	163	352
Gravimetric Energy Density (Wh/kg)	137	138
Volumetric Energy Density (Wh/L)	214	198
Cycle Life	2.500	2.500
